THE UNIVERSAL SERVER™

The Xanadu™ Electronic Storage and Publication System is a software package for managing data of all types, held together by links of arbitrary types, and stored on arbitrarily large networks of storage units. All links and shared uses may be followed bidirectionally. All parts may be continually modified, yet links remain in place and shared material may still be followed. Our shared address space commingles all data types into one universal docuverse with a common addressing scheme and data conventions across all networks: thus allowing compatibility among all cooperating applications. The server (and distributed virtual server, which is the network) promise exceptional speed and power of delivery to interactive users, a hypertext and hypermedia environment for all interactive purposes presenting a comprehensive and unifying electronic literature.

This back-end storage system is suitable for all computer applications and will become a world standard, backed by Autodesk, Inc., the world leader in CAD software. Xanadu Operating Company, Inc., an Autodesk subsidiary, has promised full LAN back-end storage management software for late 1989. The very-large-scale-network version will come later. We reach out to imaginative, skillful software developers in every nation, concerned with every type of use, to join us in this great venture.

For history, fundamental understandings and the necessary tumbler mathematics, read our book: (Additional functionality will be in the expanded architecture, to be revealed in 1989.)

Theodor Holm Nelson,
LITERARY MACHINES 87.1
price $25 (add $5 for overseas airmail, $5 if purchase order) payable to Mindful Press.

For overview lectures, seminars, and discussion of licensing the public-access service, contact:

Theodor Holm Nelson
Distinguished Fellow
Autodesk, Inc.
